- READY TO USE

Finish First with PoloPlaz

POLOPLAZ COATINGS™
NATIONAL COATINGS COMPANY

ROUTINE CARE

Dry mop the floor with an untreated dust mop frequently. Daily, spray a clean dust mop with PoloPlaz Hardwood Floor Cleaner, pushing mop the entire length of floor without stopping. Respray mop and continue back down the floor slightly overlapping the previous path. For stubborn stains or spills, spray PoloPlaz Hardwood Floor Cleaner on the stain and let it sit for no more than five seconds. Puddled cleaner will cause loss of gloss if left on the floor too long. Wipe dry and repeat if necessary. Call PoloPlaz before using any solvents to clean stains. Do not use pre-treated dust mops or floor cleaners that

contain wax, paraffin, silicone, or mineral oil. Use of these products can cause adhesion problems when recoating the floor. Never use power scrubbers or automatic floor cleaning machines that disperse water on the floor (especially water under pressure). The use of scrubber machines will void the warranty on your floor. Dirt, sand and grit will dull and accelerate the wear of the finish. Place floor mats or rugs at all entryways, bathroom exits or other high traffic areas to help reduce excessive dirt and moisture. Spills on the floor should be cleaned up immediately.

ACCIDENTS

Grease spots: To remove grease, tar, or oil, wipe with a cloth dampened with PoloPlaz Hardwood Floor Cleaner, then followed by buffing with a clean, dry cloth.

Cigarette Burns: Gently rub the burn with a very fine steel wool moistened with PoloPlaz Hardwood Floor Cleaner until the blackened material is removed. If the burn is deep, first scraped away the charred area with a sharp knife. Allow to thoroughly dry then touch up with PoloPlaz finish using a small brush.

Food, Water, or Pet spots: If accident is recent, wipe up area immediately with a dry cloth. Then wipe area with PoloPlaz Hardwood Floor Cleaner following by buffing with a clean, dry cloth. If the spot has already dried, spray area

directly with Hardwood Floor Cleaner and let sit for a few seconds. Then wipe up excess and repeat until stain is gone. Finish up by buffing with a clean, dry cloth.

Wax Deposits or chewing gum: Apply crushed ice, contained in a plastic bag, until material is brittle enough to crumble off the floor surface. Remove remainder using a cloth dampened in Hardwood Floor Cleaner then buff with a clean, dry cloth

Scratches: Light scratches that may occur in the finish can be lightly sanded or screened, then retouched with PoloPlaz finish. For large scratches, the recoating must be done by a professional.
